Marquette, MI | 906-361-1838 | ryanbryant.cyber@gmail.com | linkedin.com/in/ryqn-bryant-a35754305 | ryanbryant-cyber.github.io

Professional Summary

Cybersecurity bachelor's student targeting Cybersecurity Analyst and SOC Analyst roles, with hands-on portfolio experience across security operations, GRC, IAM/RBAC, BC/DR, third-party risk, secure architecture, endpoint hunting, and automation. Built an isolated Wazuh/Suricata/osquery lab and a five-project Northstar enterprise security program, translating technical findings into risk registers, recovery objectives, vendor decisions, architecture controls, and stakeholder reporting.

Technical Skills

Security Operations: Wazuh SIEM/XDR | Suricata | Alert Triage | Log Analysis | MITRE ATT&CK | Incident Response

Architecture & Network: Zero Trust | Network Segmentation | Trust Boundaries | UFW/iptables | Wireshark | Nmap | VirtualBox | Linux/Windows

GRC & Resilience: NIST CSF 2.0 | GRC | Risk Assessment | IAM/RBAC | BC/DR | BIA | RTO/RPO | Third-Party Risk | Security Architecture

Automation & Evidence: Python | osquery | SQL | JSON/JSONL | Alert Correlation | Data Normalization | SHA-256 Evidence Integrity

Education & Credentials

University of Phoenix, Phoenix, Arizona

Bachelor of Science in Cybersecurity | Expected May 2028

Academic Honors: President's List (1) | Dean's List (2) | Honor Societies: NSLS | Epsilon Pi Tau (Delta Sigma Chapter)

Credentials: Cloud, Wireless, & Threat Response Tactics (Apr 2026) | Endpoint & Data Protection Strategies (Mar 2026) | Google Data Analytics

Professional Certificate (Apr 2025)

Selected Cybersecurity Projects

Northstar Financial Group Enterprise Security Program | 2026

- Conducted a fictional financial-services risk assessment aligned to NIST CSF 2.0; produced an 11-finding risk register and remediation priorities across IAM, backups, vendor risk, incident response, data protection, patching, and logging.
- Designed an IAM/RBAC model across 13 systems and 11 role/identity profiles, applying least privilege, separation of duties, privileged access, Joiner-Mover-Leaver controls, service-account governance, MFA, and access reviews.
- Built a BC/DR plan with a BIA across 10 critical services, RTO/RPO targets, recovery tiers, resilient backup strategy, and a four-inject tabletop exercise with an after-action report.
- Assessed a critical managed IT vendor across 22 security questions; negotiated contract controls and reduced target residual risk from 4.1/5 to 2.1/5, supporting a Conditional Go renewal recommendation.
- Designed a target-state enterprise security architecture using default-deny segmentation, Zero Trust principles, separate user/admin/vendor/security/backup trust zones, secure remote access, controlled data flows, and isolated recovery infrastructure.

Security Operations Engineering | 2026

- Developed a Python alert-triage pipeline that normalized 42 Suricata/Wazuh records into 21 unique events with 21 verified mirrors, zero parser errors, six analyst outputs, and SHA-256 integrity checks.
- Built an osquery endpoint-hunting pack across seven security domains and engineered a guarded Wazuh Active Response workflow with source-specific iptables containment and verified 120-second automated rollback.

Leadership & Military Experience

U.S. Army | 2013-2020

- Held leadership positions across three units and was selected to manage a division-level armory, reinforcing accountability, sensitive-asset control, procedural compliance, and team coordination.
- Received multiple Army Achievement Medals (AAMS) and Certificates of Achievement (COAs) for performance and service.

Portfolio

ryanbryant-cyber.github.io - 18 documented cybersecurity investigations and assessments spanning SOC operations, GRC, IAM/RBAC, BC/DR, third-party risk, security architecture, automation, vulnerability analysis, endpoint hunting, and stakeholder reporting.
